UNITED STATES DEPARTMENT OF AGRICULTURE

AGRICULTURAL MARKETING SERVICE

DAIRY DIVISION

SUMMARIES OF

FEDERAL MILK MARKETING ORDERS

and

Federal Register Citations

Revised through: January 1, 1957

Attached are inserts to be substituted for the corresponding pages (or added, if corresponding pages do not exist) in the Summaries Of Federal Milk Marketing Orders (and Federal Register Citations). These inserts include amendments to existing Federal Orders which became effective during the period of November 2, 1956 through January 1, 1957. Last insert issued covered changes through November 1, 1956

In order to effect a gradual revision of the entire summary compilation, the inserts at times, may include certain pages which have been rewritten merely to conform to present format and which do not reflect any changes in order provisions.

Agriculture - Washington.

Table 2 - Basis for determining Class I prices in Federal milk order markets, and markets having a supply-demand adjuster. 1/

Market	Price paid at					
	Supply- Demand Adjuster:	12 Midwest condenseries: 3/	Specified mfg. plants	Butter- powder	Butter- cheese	Economic factors

- 1/ Where a market has more than one basis checked (x) for determining the price the Class I price is determined each month from the alternative which results in the highest price.
- 2/ Class I price is based on the Class I price of another Federal order which has a supply-demand adjuster.
- 3/ As specified in Order No. 41 for Chicago.
- 4/ Supply-demand adjustment is taken from another Federal order.
- 5/ Class I price is based on the Class I price of another Federal order which uses these formulas.
- 6/ Plus 4 local plants.

Class Prices (3.7 percent butterfat):

Class I Milk Price - The Class I price per hundredweight at plants located in the 201-210 mile zone is the New England Basic Class I price per hundredweight determined as follows:

- * a. New England Basic Class I Price - A New England basic Class I price index is determined by multiplying the economic index by the supply-demand adjustment factor and multiplying the result by the applicable seasonal adjustment factor (determination of these factors are set forth in paragraphs b, c, and d below).

The New England Class I price index is then multiplied by \$0.05592 and the Class I price is determined from the following schedule according to the applicable range which corresponds to such index:

* <u>New England Basic Class I Index</u>	<u>Class I Price</u>
\$ 4.20 but less than \$4.42	\$4.31
4.42 " " " 4.64	4.53
4.64 " " " 4.86	4.75
4.86 " " " 5.08	4.97
5.08 " " " 5.30	5.19
5.30 " " " 5.52	5.41
5.52 " " " 5.74	5.63
5.74 " " " 5.96	5.85
5.96 " " " 6.18	6.07
6.18 " " " 6.40	6.29

A contraseasonal provision provides that the New England basic Class I price for November and December shall not be lower than such price for the immediately preceding month.

- b. Economic index - i.e., The average of the following three indexes using the latest figures available to the market administrator on the 25th of the preceding month:
- (1) Wholesale price index - monthly wholesale price index for all commodities (1947-49 base) of the Bureau of Labor Statistics divided by 1.143.
 - * (2) Per capita disposable income in New England, Index - from the data on per capita personal income, by States and regions, as published by the Department of Commerce, obtain the New England adjustment percentage for the percentage relationship of the New England per capita personal income to the national per capita personal income. Multiply the latest quarterly figures on per capita disposable personal income in the United States by the New England adjustment percentage and divide the result by 15.34. Use figures published by the Department of Commerce or the Council of Economic Advisers.

Class II Milk Price cont'd

Butter-cheese adjustment - (Sect. 904.44) The value of butterfat used in the manufacture of butter and specific types of cheese during the months of April through July shall be reduced by the amount determined by subtracting the result of paragraph (a) from the result of paragraph (b):

- a. New York 92-score butter x 1.2
- b. Weighted average price per 40 quart can of 40 percent bottling quality cream f.o.b. Boston Market - 52.5 cents \div 33 x .98.

If the price of cream is not reported the result of paragraph (a) is subtracted from the following:

Chicago 92-score butter x 1.22.

Butterfat Differentials:

Class Prices - No handler butterfat differential, in effect the producer differential applies; butterfat subject to differential does not clear through the pool.

Producer Price - Differential is determined as follows: Weighted average price per 40 quart can of 40 percent bottling quality cream f.o.b. Boston market - 52.5 cents \div 330.

When cream price is not reported, the following computation is used:

Chicago 92-score butter x 0.125

(Butter price used is average of daily prices from 16th of preceding month to 15th of current month).

* Location Differentials:

Class Prices - A rate based on the highway distance between Boston and the mileage zone for each plant is used to determine the class differentials. The differentials are divided into 10 mile intervals (zones). The basic price applies to the 21st zone (201-210 miles) The Class I price is increased 1.2 cents for each zone between the 21st and the city plant zone and decreases 1 cent for each zone beyond the 21st zone.

* Location Differentials - cont'd

Following is an abbreviated schedule of zone differentials (see Section 904.42 of the order):

<u>Miles</u>	<u>Zone</u>	<u>Class I and Blend Differentials (cents per cwt)</u>	<u>Class II Differentials (cents per cwt)</u>
40 or less	City	+ 54.0	+ 38.1
41 - 50	5	+ 19.2	+ 4.2
101 - 110	11	+ 12.0	+ 2.9
151 - 160	16	+ 6.0	+ 1.3
201 - 210	21	0	0
211 - 220	22	- 1.0	- 0.6
251 - 260	26	- 5.0	- 1.2
301 - 310	31	- 10.0	- 2.3
351 - 360	36	- 15.0	- 3.0
401 - 410	41	- 20.0	- 3.5
451 and over	46 and over	xx	- 3.5

xx Class I and blended price differentials for plants located more than 450 miles from Boston are extended at the rate of 1 cent for each 10 miles, except that in no event shall such price at such plant be less than the Class II price at such plant.

Class Prices (3.7 percent butterfat):

- * Class I Milk Price - The Class I price per hundredweight at city plants is the New England Basic Class I price for the month (see Boston summary) plus 54 cents.

Class II Milk Price - The Class II Price at city plants is the Boston Class II price for the month plus 5.8 cents.

Butterfat Differentials:

Class Prices - None; milk is accounted for on a volume basis.

Producer Price - The same differential as determined for the corresponding month under the Boston order - i.e., weighted average price per 40 quart can of 40 percent cream f.o.b. Boston market - 52.5 cents ÷ .330.

When the cream price is not reported the following formula is used:
Chicago 92-score butter x 0.125.

(Both: cream and butter prices are from the 16th of the preceding month to the 15th day of the current month).

* Location Differentials:

Class I and Class II Prices - With respect to milk received from producers at a country plant the Class I and Class II prices are reduced at rates based upon the highway distance such plant is located from the city of Lawrence. The Class I price is reduced 1.2 cents for each zone (10 miles) from the 5th zone (41 - 50 miles) through the 21st zone (201 - 210 miles) and 1 cent for each zone beyond the 21st zone. Following is an abbreviated schedule of the location differentials applicable to the Class I, Class II and blend prices (Section 934.42 of the order).

<u>Miles</u>	<u>Zone</u>	<u>Class I and Blend Differentials (cents per cwt)</u>	<u>Class II Differentials (cents per cwt)</u>
40 or less	4	- 17.0	- 2.0
41 - 50	5	- 34.8	- 2.0
51 - 60	6	- 36.0	- 3.0
101 - 110	11	- 42.0	- 4.5
151 - 160	16	- 48.0	- 6.0
201 - 210	21	- 54.0	- 7.0
251 - 260	26	- 59.0	- 8.0
301 and over	31	xx	- 8.0

- xx For plants located more than 300 miles from Merrimack Valley the Class I price differentials are extended at the rate of 1 cent for each 10 miles, except that in no event shall the Class I price at such plant be less than the Class II price at such plant.

Class I Milk - cont'd

- * b. Disposed of as sweet or sour cream, and mixtures of cream or milk (or skim milk) containing more than 6 percent butterfat other than eggnog,
- c. Used to produce concentrated milk (excluding evaporated and condensed milk) for fluid consumption, and
- d. Not specifically accounted for in the above products or as Class II, Class III or Class IV milk.

* Class II Milk - All skim milk and butterfat:

- a. Used to produce cottage cheese, eggnog, and any mixture containing skim milk or butterfat disposed of in containers under pressure for the purpose of dispensing an aerated product.

Class III Milk - All skim milk and butterfat:

- a. Used to produce frozen cream, condensed milk and condensed skim milk (except evaporated milk or skim milk in hermetically sealed cans), ice cream, ice cream mix, ice cream novelties, ice sherberts, or imitation ice cream.

Class IV Milk - All skim milk and butterfat specifically accounted for as:

- a. Having been used to produce any product other than those products or uses specified as Class I, Class II, or Class III milk,
- b. Having been dumped or disposed of for livestock feed.
- c. Actual plant shrinkage of other source milk, and actual plant shrinkage of skim milk and butterfat up to 2 percent, in producer milk.

Class Prices (3.5 percent butterfat):

Basic Formula Price - A basic formula price is used in computing Class prices and is the higher of the following:

- a. Average of prices reported paid during the month for milk of 3.5 percent butterfat content at specified Midwest condenseries (see Chicago summary for list).
- b. (Chicago 92-score butter - 3.5¢ x 1.2 x 3.5) +
(Chicago area spray-roller powder - 4 cents x 8.2)

Class I Milk Price -

To the basic formula price at \$1.10 and add or subtract the applicable supply-demand adjustment; the resulting amount is used to determine:

(1) The Class I butterfat price (per hundredweight) by multiplying the Class I whole milk price thus computed by the percentage factor (see below), and dividing the result by 0.035.

(2) The Class I skim milk price (per hundredweight) by subtracting from the whole milk price thus computed, the Class I butterfat price divided by 0.035, and dividing the remainder by 0.965.

- * Supply-demand adjustment - A current utilization percentage is computed from the percentage which total producer receipts are of the total gross volume of Class I milk (less interhandler transfers) for the current and first preceding month.

Determination is then made of a net utilization percentage by subtracting from the current utilization percentage the appropriate standard utilization percentage shown below:

* Month	Standard Percentage	Month	Standard Percentage	Month	Standard Percentage
Jan.	128	May	144	Sept.	131
Feb.	127	June	152	Oct.	128
Mar.	130	July	147	Nov.	128
Apr.	135	Aug.	143	Dec.	124

Amount of the supply-demand adjustment is determined from the schedule below:

<u>Net Utilization</u>	<u>Amount (cents)</u>
+ 16 or over	- 38
+ 12 or + 13	- 28
+ 8 or + 9	- 20
+ 4 or + 5	- 10
+ 11 or - 1	0
- 4 or - 5	+ 10
- 8 or - 9	+ 20
- 12 or - 13	+ 28
- 16 or under	+ 38

Percentage Factor - A percentage factor is used in the computation of Class I, Class II and Class III butterfat and skim milk prices and is determined as follows:

$$\text{Percentage Factor} = \frac{\text{Chicago 92-score butter} - 3.5\phi \times 4.2}{(\text{Chic. 92-score butter} - 3.5\phi \times 4.2) + (\text{Chic. area spray powder} - 4\phi \times 8.2)}$$

* Class II Milk Price

Add 70 cents to the basic formula price and add or subtract the supply-demand adjustment, the resulting sum is used to determine the:

(1) Class II butterfat price (per hundredweight) - by multiplying the Class II whole milk thus computed, by the percentage factor (see above), and dividing the result by 0.035 (in no event shall this price be less than the Class III butterfat price).

(2) Class II skim milk price (per hundredweight) - by subtracting from the whole milk price thus computed, the Class II butterfat price multiplied by 0.035 and dividing the remainder by 0.965.

* Class III Milk Price

Add to the basic formula price the following:

August through March -- 60 cents, plus or minus the supply-demand adjustment;

April through July -- 30 cents.

The resulting amount is used to determine the:

(1) Class III butterfat price (per hundredweight) by multiplying the Class III whole milk price thus computed, by the percentage factor (see above), and dividing the result by 0.035 (in no event shall this price be less than 0.06 cents per pound above the Class IV butterfat price).

(2) Class III skim milk price (per hundredweight) by subtracting from the whole milk price thus computed, the Class III butterfat price multiplied by 0.35, and dividing the remainder by 0.965.

Class IV Milk Price

* (1) Class IV butterfat price (per hundredweight) - From the Chicago 92-score butter subtract 3.5 cents and multiply by 120.

(2) Class IV skim milk price (per hundredweight) - From the Chicago area spray-roller powder price subtract 5.5 cents and multiply by 8.5.

Butterfat Differentials:

Class Prices - None - skim milk and butterfat are priced separately.

Butterfat Differentials: cont'd

- * Producer Price - From the weighted average price per hundredweight of all butterfat from producer milk in Class II, Class III and Class IV milk subtract the weighted average price of all skim milk from producer milk in Class II, Class III and Class IV milk and divide by 1,000.

Location Differentials:

Class Prices - With respect to whole milk moved directly to the marketing area from a "regulated plant" which is located more than 40 miles from the State Capitol, Columbus the price is reduced 17 cents.

Producer Price - 17 cents per hundredweight may be deducted with respect to producer milk received at "regulated plants" more than 40 miles from the State Capitol, Columbus.

Method of Accounting for Milk:

Skim milk and butterfat are accounted for separately.

Type of Pool:

Market-wide, monthly pool with fall premium plan.

Interhandler Transfers:

Skim milk and butterfat transferred from a "regulated plant" in the form of products specified as Class I are classified:

- a. According to reported utilization when transferred to the "regulated plant" of another handler.
- b. As Class I when transferred to the plant of a producer-handler.

Outside Purchases:

Other source milk (except milk received under an emergency permit) is subtracted, in series, beginning with Class IV after deduction is first made for shrinkage.

Other source milk received under an emergency permit issued by an appropriate health authority is deducted pro rata from each class.

Outside Sales:

Class I and Class II milk sold outside the marketing area is priced the same as milk sold within the marketing area except that the price for milk disposed of in the area under another Federal order shall be the applicable price under the Columbus order or the price under the other order, whichever is higher.

Outside Sales cont'd

- * Skim milk or butterfat moved from a "regulated plant" to an unregulated plant is classified as Class I if moved in the form of products specified in Class I. In the event the transferring handler claims other classification on the basis of utilization and such utilization may be audited at the receiving plant, the transferred skim milk and butterfat will be classified accordingly.

Expense of Administration:

Handlers pay administrative costs not to exceed 2 cents per hundredweight with respect to all receipts of producer milk (except receipts from other handlers) and other source milk at a "regulated plant".

Special Producer Provisions:

Marketing Service - Deductions as authorized by members are turned over to cooperative associations.

Marketing Service charges not to exceed 5 cents per hundredweight are deducted from non-members.

Fall Premium Plan - 35 cents per hundredweight of producer milk is deducted for each of the months during the period of April through July. The resulting sum is distributed in three equal parts the following October, November and December.

Special Handler Provisions:

Skim milk and butterfat in the form of milk or skim milk disposed of in bulk fluid form during April, May, June or July to a manufacturer of soup, candy, or bakery products is classified as Class II, and in other months it is classified as Class I.

Producer skim milk (other than that used to produce condensed skim milk) in excess of that classified as Class I, Class II or Class III and disposed of during the months of April through July as condensed milk to a person whose supply of milk is not produced under permits issued by an appropriate health authority is priced at the Class IV price.

Producer-handler:

A producer-handler who operates a dairy farm and who receives no milk, other than exempt milk 4/, from other dairy farmers except producer-handlers. Producer-handlers are required to make payments to the pool under conditions set forth under "Special Handler Provisions" of the summary and Section 996.65 (a) of the order.

Classification:

Class I Milk -

- a. All fluid milk 2/ disposed of as, or in, milk (includes milk the butterfat content of which has been adjusted to at least 0.5 percent and less than 10 percent, frozen milk, reconstituted milk, and 50 percent by weight of half and half) and fluid milk products disposed of for fluid consumption as, or in, flavored or cultured skim milk, or buttermilk.
- b. 98 percent by weight of fluid milk products used to produce concentrated milk.
- c. Fluid milk products not utilized as Class II products.

Class II Milk -

- a. Cream (includes sour cream, frozen cream, milk and cream mixtures containing 16 percent or more butterfat and 50 percent of the quantity by weight of half and half), and any fluid milk product not designated as Class I.
- b. Plant shrinkage not in excess of 2 percent of the volume handled.

Class Prices (3.7 percent butterfat):

- * Class I Milk Price - The Class I price per hundredweight at city plants is the New England basic Class I price for the month (see Boston Summary) plus 54 cents.

Class II Milk Price - The Class II price per hundredweight at city plants is the Boston Class II price for the month plus 5.8 cents.

4/ Exempt milk - i.e., equivalent amounts of bulk and packaged milk moving between "regulated plants" and unregulated plants or dairy farmers during any month.

Butterfat Differentials:

Class Prices - None; milk is accounted for on a volume basis.

Producer Price - The same differential as determined for the corresponding month under the Boston order - i.e., weighted average price per 40 quart can of 40 percent cream f.o.b. Boston Market - 52.5 cents ÷ 330.

When the cream price is not reported the following computation is used: Chicago 92-score butter x 0.125. (Both cream and butter prices are from the 16th of the preceding month to the 15th of the current month).

* Location Differentials:

Class I and Class II Prices - With respect to milk received from producers at a country plant the Class I and Class II prices are reduced at rates based upon the highway distance such plant is located from the city of Springfield. The Class I price is reduced 1.2 cents for each zone (10 miles) over 50 miles up to 210 miles and thereafter is reduced 1 cent for each zone. Following is an abbreviated table of location differentials applicable to the Class I, Class II and blend prices (section 966.42 of the order).

<u>Miles</u>	<u>Zone</u>	<u>Class I and Blend Differentials (cents per cwt)</u>	<u>Class II differentials (cents per cwt)</u>
40 or less	4	- 17.0	- 2.0
41 - 50	5	- 34.8	- 2.0
51 - 60	6	- 36.0	- 3.0
101 - 110	11	- 42.0	- 4.0
151 - 160	16	- 48.0	- 6.0
201 - 210	21	- 54.0	- 7.0
251 - 260	26	- 59.0	- 8.0
301 & over	31	xx	- 8.0

xx For plants located more than 300 miles from Springfield the Class I and blend price differentials are extended at the rate of 1 cent for each 10 miles, except that in no event shall the Class I or blend price at such plant be less than the Class II price at such plant.

Producer Price - With respect to payments made by handlers for producer milk received at "regulated plants" the uniform price is reduced per hundredweight in accordance with the same schedule which applies to Class I milk except that nearby location differentials of 46 cents are added to the producer price with respect to milk received from producers who farms are located in Franklin, Hampshire, Hampden, or Worcester Counties in Massachusetts, or in specified cities or towns in the States of Connecticut, New Hampshire, or Vermont. A nearby differential of 23 cents is added with respect to milk delivered by producers whose farms are located in certain other specified cities and towns in the States of Massachusetts, New Hampshire, or Vermont. Such nearby location differentials, however, are limited to an amount such that the producer price is not in excess of the Class I price at the plant to which the milk is delivered.

Class Prices (3.7 percent butterfat):

- * Class I Milk Price - The Class I price per hundredweight at city plants is the New England basic Class I price for the month (see Boston Summary) plus 54 cents.

Class II Milk Price - The Class II price per hundredweight at city plants is the Boston Class II price for the month plus 5.8 cents.

Butterfat Differentials:

Class Prices - None; milk is accounted for on a volume basis.

Producer Price - The same differential as determined for the corresponding month under the Boston order - i.e., weighted average price per 40 quart can of 40 percent cream f.o.b. Boston Market - 52.5 cents ÷ 330.

When the cream price is not reported the following formula is used:
Chicago 92-score butter x 0.125.

(Both cream and butter prices are from the 16th day of the preceding month to the 15th day of the current month).

* Location Differentials:

Class I and Class II Prices - With respect to milk received from producers at a country plant the Class I and Class II prices are reduced at rates based upon the highway distance such plant is located from Worcester. The Class I price is reduced 1.2 cents for each zone (10 miles) from the 5th zone through the 21st zone (201 - 210 miles) and 1 cent for each zone thereafter. Following is an abbreviated table of location differentials applicable to the Class I, Class II and blend prices. (section 999.42 of the order).

<u>Miles</u>	<u>Zone</u>	<u>Class I and Blend Differentials (cents per cwt)</u>	<u>Class II Differentials (cents per cwt)</u>
40 or less	4	- 17.0	- 2.0
41 - 50	5	- 34.8	- 2.0
51 - 60	6	- 36.0	- 3.0
101 - 110	11	- 42.0	- 4.5
151 - 160	16	- 48.0	- 6.0
201 - 210	21	- 54.0	- 7.0
251 - 260	26	- 59.0	- 8.0
301 and over	31	xx	- 8.0

xx For plants located more than 300 miles from Worcester the Class I and blend price differentials are extended at the rate of 1 cent for each 10 miles, except that in no event shall the Class I price at such plant be less than the Class II price at such plant.

* Class I Milk Price cont'd

To this price, add or subtract a supply-demand adjustment not to exceed 50 cents computed as follows: 1/

Supply-Demand Adjustment - A current utilization percentage is computed from the percentage which the total volume of producer receipts at "regulated plants" are of the total volume of Class I disposed of at such plants during the second and third preceding months.

Determination is then made of the amount by which such current utilization percentage exceeds the higher figure, or is less than the lower figure, of the appropriate base utilization range in the following table:

<u>Month</u> <u>Which Price</u> <u>Applies</u>	<u>Base</u> <u>Utilization</u> <u>Range</u>	<u>Month</u> <u>Which Price</u> <u>Applies</u>	<u>Base</u> <u>Utilization</u> <u>Range</u>
January	108 - 110	July	142 - 144
February	114 - 116	August	138 - 140
March	118 - 120	September	131 - 133
April	123 - 125	October	123 - 125
May	132 - 134	November	115 - 117
June	138 - 140	December	107 - 109

The resulting net deviation percentage determines the specific Class I price adjustment at the rate of 3 cents for each percent deviation.

The amount thus computed shall be added to the Class I price if the net deviation percentage was less than, or subtracted if more than, the base utilization range.

Class II Milk Price - For each of the months of:

April, May, June - A price computed by alternative c. under Basic Formula Price.

July through March - The higher of prices computed by alternatives b. or c. under the Basic Formula Price.

Butterfat Differentials:

Class I Price - Chicago 92-score butter for the preceding month x 0.125.

Class II Price - March through June: Chicago 92-score butter for current month x 0.110.

All other months - Chicago 92-score butter for the current month x 0.115.

* 1/ For the months of January, February and March, 1957 the supply-demand adjustment is not applicable.
